

Developer Experience...

Central to DevOps Success

What is Developer Experience?

DevEx is *more* than just your parent's
software development lifecycle

Jeremy Meiss

Co-Founder, DevEx Consultant

So what is DevEx?

So what is DevEx?

*"...the **journey** of developers as they learn and deploy technology, which if successful, focuses on eliminating obstacles that hinder a developer or practitioner from achieving success in their endeavors."*

DevEx includes every interaction a developer has with systems, tools, and processes

The HP SoftBench Environment: An Architecture for a New Generation of Software Tools

The HP SoftBench product improves programmer productivity by integrating software development tools into a single unified environment, allowing the program developer to concentrate on tasks rather than tools.

by Martin R. Cagan

THE HP SOFTBENCH PRODUCT is an integrated software development environment designed to facilitate rapid, interactive program construction, test, and maintenance in a distributed computing environment.

The HP SoftBench environment provides an architecture for integrating various CASE (computer-aided software engineering) tools. Many of the tools most often needed—program editor, static analyzer, program debugger, program builder, and mail—are included in the HP SoftBench product. Another HP SoftBench component, the HP Encapsulator, makes it possible to integrate other existing tools into the HP SoftBench environment and to tailor the environment to a specific software development process. Fig.

1 illustrates the HP SoftBench user interface.

This article describes the HP SoftBench tool integration architecture. The HP SoftBench program editor, static analyzer, program debugger, program builder, and mail are described in the article on page 48. The HP Encapsulator is described in the article on page 59.

Design Objectives

The overall goal of the HP SoftBench product is to improve the productivity of programmers doing software development, testing, and maintenance. To achieve this goal, the following objectives were defined for the tool integration architecture:

From this:

"...the use of an IDE was not well received by developers since it would fence in their creativity."

IDEs are a result of DevEx

Things we never knew we needed...

To this:

- Code completion
- Syntax highlighting
- Debugging
- VCS integration (no more FTPing files around)
- Multi-language support
- Framework integration
- Pair programming

IaC and DevOps Integration

2010s to Present

Broader Impact of DevEx

- Deployment Pipelines
- Infrastructure as Code (IaC) Practices
- Developer Efficiencies

Good DevOps == Good DevEx

- Facilitates smoother transitions between Dev and Ops
- Minimizes bottlenecks with enhanced collaboration
- Ensures feedback loops are efficient and productive
- Enables DevOps principles to take hold within an organization

What is DevOps?

*the combination of practices and tools
designed to increase an organization's ability
to deliver applications and services faster
than traditional software development
processes*

DevOps Principles + DevEx alignment

- Collaboration

- Shared Responsibility

DevOps Principles + DevEx alignment

- Enhanced collaboration *via tools and processes*
- Improving communication *via streamlined info sharing and feedback*
- Shared responsibility *by empowering all teams with access and information*

The background features a large, intricate circular graphic. At its center is a bright, glowing orange and yellow sunburst or starburst pattern. Surrounding this center are several concentric rings. The innermost ring is a dark blue band with a fine, grid-like texture. The next ring out is a wider band containing numerous circular icons. These icons are rendered in a metallic, 3D style and include symbols such as gears, a heart, a lightbulb, a cloud, a person, a document, a camera, a magnifying glass, a globe, a smartphone, a laptop, a gear with a heart, a gear with a lightbulb, a gear with a cloud, a gear with a person, a gear with a document, a gear with a camera, a gear with a magnifying glass, a gear with a globe, a gear with a smartphone, a gear with a laptop, a gear with a gear and heart, a gear with a gear and lightbulb, a gear with a gear and cloud, a gear with a gear and person, a gear with a gear and document, a gear with a gear and camera, a gear with a gear and magnifying glass, a gear with a gear and globe, a gear with a gear and smartphone, and a gear with a gear and laptop. The outermost ring is a dark blue band with a fine, grid-like texture, similar to the one inside. The entire graphic is set against a dark, textured background with a subtle pattern of glowing lines and particles, giving it a high-tech, futuristic feel.

DevOps and DevEx are One

Platform Engineering

The rise of Platform Engineering

- Creation of specific, integrated environments that devs need
- Abstract away complexities of infrastructure & backend services
- Ensure devs have access to robust, scalable, easy-to-use platforms
- Streamline development processes and reduce setup time

Self-Service Platforms

- Empower developers to control their needs with necessary tools
- Leverage automation, templates, policies with agility
- Accelerate development, enhance productivity, and foster autonomy and innovation

Better Practices

- Empower with the right tools
- Encourage Cross-functional Teams
- Implement Feedback Loops
- Focus on Automation
- Invest in Training and Development

DevEx Impact

Productivity

- Streamlined Development Environments
- Integrated and Automated Toolchains
- Efficient Collaboration Platforms

DevEx Impact

Morale

- Autonomy and Empowerment
- Recognition and Achievement
- Reduced Frustration and Burnout
- Learning and Growth Opportunities

DevEx reflects an organizations values

@IAmJerdog · [Follow](#)

If your company does not already have a process for gathering feedback (internal & external) on your product and/or the tools you use, you will not have a good Developer Experience, and I seriously question your commitment to it.
